Two Terex Cranes TRT 80 for Scandiuzzi in Italy

Topics: Scandiuzzi Steel Constructions, Terex Cranes, Terex Cranes Tecno-Gru srl, Terex Rough Terrain Crane, TRT 80

Scandiuzzi Steel Constructions have just completed the purchase of two Terex Cranes TRT 80s. The choice of going for the Terex Rough Terrain Crane, the TRT 80, was supported by Italian dealer of Terex Cranes Tecno-Gru srl. Tecno-Gru have a long-standing and solid relationship with Scandiuzzi and are an important dealer for Terex Cranes.

Andrea Pavoni, Sales Director of Tecno-Gru had this to say, "Tecno-Gru srl is proud and honoured to have sold to Scandiuzzi Steel Construction these two new Terex TRT80 cranes, crowning a relationship that has been going on for years with the prestigious company from Treviso, a national and international reference point in the metal construction and Oil & Gas market.

The final choice to purchase a Terex crane came from the expertise and knowledge provided by Tecno-Gru on Terex Cranes TRT 80, and the external factors that made the TRT80 the standout choice for Scandiuzzi Steel Constructions. The cranes needed to be able to handle

rough, uneven and unstable terrain if brought onto an external job site. It was important that the reach and capacity of the crane was excellent whilst also being a compact machine. The TRT 80 is a compact rough terrain crane that has a maximum capacity of 80t, a max main boom length of 42.1m and max tip height of 45.0m making it the perfect choice for the needs of Scandiuzzi in this particular case.

The new TRT 80s will be used by Scandiuzzi Steel Constructions for jobs including the internal handling of large steel components, assembly and erection within the port area, lifting and assembly at construction sites and general yard logistics including loading and unloading equipment and materials.

A fine example of the work Scandiuzzi complete is a project in Genoa, they built a platform for the port of Genoa, a 20m x 90m base that can be submerged into the basin there, which, with the help of a winch mechanism, lifts yachts and other craft for maintenance, wintering and other services.
